

How to limit access to the admin menu

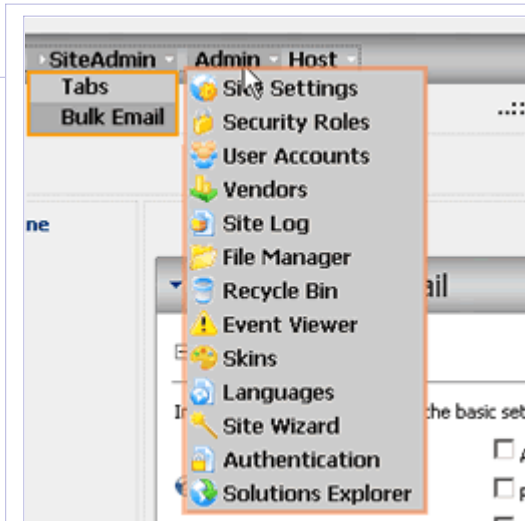

By Lee Sykes

November 2007

In this tutorial we demonstrate how you can enable additional users without the administrator security role, access to the pages from the DotNetNuke admin menu.

There are many times when you may want to give a user who edits the content of your site access to the 'Pages' or 'Newsletters' menu items, but at the same time, you may not wish to give them any further access to the admin menu, such as access to the 'Site Settings'.

In this tutorial we outline how you can give users additional rights to access individual pages from the admin menu.
